Professional Summary

Aspiring Data Analyst with practical skills in SQL, Python, Power BI, and Machine Learning. Built end-to-end analytics projects involving customer intelligence, SQL business analysis, customer segmentation, and regression modeling, delivering business-ready datasets and interactive dashboards.

Education

B. Tech - Data Science, DPG Institute of Technology and Management
CGPA - 8/10

2022 – 2026

Skills

Programming

Python, SQL

Data Analysis

Pandas, NumPy, EDA, Data Cleaning, Data Modeling

BI & Visualization

Power BI, Excel, Tableau, Matplotlib

Machine Learning

Scikit-learn, Regression, Classification, Feature Engineering, K-Means, RFM Analysis

Tools

Git, GitHub, MySQL

Projects

Bank Loan Risk Analytics  , Python, SQL, Power BI, Streamlit, Scikit-Learn

May 2026 – June 2026

- Analyzed 2.26M+ loan records to identify lending risks and borrower default patterns.
- Built an optimized Logistic Regression model achieving a ROC-AUC of 70.34% for loan risk prediction.
- Created interactive Power BI dashboards for portfolio monitoring, risk segmentation, and geographic analysis.
- Deployed a Streamlit application enabling real-time loan default risk prediction.

Bangalore Housing Market Investment Analytics 

March 2026 – April 2026

Python, SQL, Power BI, Random Forest

- Built an end-to-end analytics solution evaluating Bangalore's residential housing market for a ₹500 Cr investment strategy using data cleaning, EDA, SQL, predictive modeling, and Power BI.
- Developed a Random Forest valuation model achieving $R^2 = 0.92$, identifying key pricing drivers including property size, price per sqft, location, and housing attributes.
- Identified premium, affordable, and high-demand residential micro-markets through market segmentation and interactive dashboards.

Retail Consumer Intelligence Platform  , Python, SQL, Power BI, Scikit-learn

January 2026 – February 2026

- Built an end-to-end retail analytics platform integrating SQL business analysis, Customer 360 engineering, RFM analysis, K-Means clustering, and Power BI dashboards across 9 transactional datasets and 113K+ marketplace orders.
- Engineered customer-level behavioral features and segmented customers using RFM and K-Means clustering, enabling targeted retention strategies for premium, loyal, frequent, new, and dormant customer groups.
- Developed executive dashboards covering revenue trends, customer behavior, product performance, seller operations, logistics, and payment analytics to support business decision-making

Certificates

- Executive Certification in Data Science**  — AnalytixLabs & E&ICT Academy, IIT Guwahati
- Data Visualization and Analytics**  — FutureSkills Prime (NASSCOM)
- Data Analytics with Python**  — NPTEL
