PROFESSIONAL SUMMARY

Data Science graduate skilled in end-to-end machine learning pipelines supervised and unsupervised using Python, Scikit-learn. Experienced in feature engineering, model evaluation, SQL-based data processing, and deploying ML models via Streamlit. Proficient in Power BI, Tableau, and workflow automation with n8n.

SKILLS

- Programming Languages:** Python, SQL (MySQL)
- Machine Learning:** Scikit-learn, Regression, Bagging Models, Boosting Models, Classification, Supervised Learning, Unsupervised Learning, K-Means Clustering, RFM Analysis, Feature Engineering, Feature Selection, Hyperparameter Tuning, Model Calibration
- Data Analysis:** Pandas, NumPy, EDA, Data Cleaning, Data Modeling, Statistical Analysis
- BI & Visualization:** Power BI, Tableau, Matplotlib, Seaborn, Excel
- Automation & Productivity:** n8n, Notion
- Deployment & Tools:** Streamlit, Git, GitHub

PROJECTS

- Bank Loan Risk Analytics** [🔗](#) 05/2026 – 06/2026
Python, SQL, Power BI, Streamlit, Scikit-Learn
- Built and optimized a supervised Logistic Regression classification model on 2.26M+ loan records, applying feature engineering, feature selection, and hyperparameter tuning - achieving ROC-AUC of 70.34%.
 - Owned the full ML pipeline end-to-end: SQL-based data processing, EDA, model development, calibration, and validation with structured deliverables at each stage.
 - Deployed the model as a Streamlit web application for real-time loan default risk scoring; built Power BI dashboards for portfolio monitoring and risk segmentation.
- Bangalore Housing Market Investment Analytics** [🔗](#) 03/2026 – 04/2026
Python, SQL, Power BI, Random Forest
- Developed a supervised Random Forest regression model ($R^2 = 0.92$) with feature engineering and hyperparameter tuning to identify key pricing drivers — supporting a \$500 Cr investment strategy.
 - Segmented residential micro-markets into premium, affordable, and high-demand categories through statistical analysis and unsupervised clustering techniques.
 - Delivered actionable findings via interactive Power BI dashboards covering property pricing, location analysis, and investment opportunity mapping.
- Retail Consumer Intelligence Platform** [🔗](#) 01/2026 – 02/2026
Python, SQL, Power BI, Scikit-Learn
- Applied unsupervised K-Means clustering and RFM analysis across 9 transactional datasets and 113K+ marketplace orders — engineered behavioral features to segment customers into 5 actionable groups.
 - Managed the full analytical workflow independently: SQL data integration, feature engineering, model evaluation, and executive dashboard delivery.
 - Built Power BI dashboards covering revenue trends, customer behavior, product performance, and operational analytics to support cross-functional business decision-making.

EDUCATION

- B. Tech - Data Science** 2022 – 2026 | Gurugram, India
DPG Institute of Technology and Management
CGPA - 7.5/10

CERTIFICATES

- Executive Certification in Data Science:** [🔗](#) — AnalytixLabs & E&ICT Academy, IIT Guwahati
- Data Visualization and Analytics:** [🔗](#) — FutureSkills Prime (NASSCOM)
- Data Analytics with Python:** [🔗](#) — NPTEL
